TO: File
FROM: Frank J. Filas, Reclamation Engineer
RE: Site Inspection, Straight Creek, M/017/018

On May 18, 1987, Frank Filas and Bill Almas of Energy Fuels Nuclear inspected the Straight Creek Mine. It was agreed that grading the waste pile back towards the highwall (i.e., the portal) would be the best way to reclaim the site. Energy Fuels Nuclear may wish to keep the portal and access road open and the mine in suspension for an extended period. This appears to be a reasonable request as long as the waste pile, which comprises the majority of the disturbance, is adequately reclaimed.
